Equipment Warehouse

Every production demands its exclusive equipment, from safety goggles all the way to materials we use in manufacturing our products. For a corporation with this huge amount of resulted efforts on daily basis, we need to make sure of efficient access to all these pieces. They are stored with highly sensitive storing system to reduce as much time on accessing them as possible which would be the whole purpose of equipment warehouse.

Mold Unit

Casting is done by special molds which are known as tablets. These tablets are designed by special CNC machines and then are made in multiple numbers by cast iron. Producing tablets requires lots of effort which is why in this unit we dedicated 90 machines to form such molds. All molds are temporary and are recycled after the iron cooled down and broke free out of it.

SAMEN FERFORGE

Hashtomin Noor Metal Industries co. is the premier producer and exporter of forged pieces and wrought iron located in Tehran province, Pakdasht. Samen is honored to be of constant improvement in terms of innovating new technological methods as one specialized complex in domestic industrialization.

 [hnsamenferforge](#)

Shot Blast

Metal pieces would eventually experience a long process to take the shape we want. This means dusts, greasy layers along with many other features would seat on the surface of the products. This layer would definitely cause a problem. That's why we use shot blast to remove these layers of impurities and prepare the pieces for painting.

Hot Pressing Line

The word hot indicates what goes on in hot pressing line of Samen Ferforge. Metal is heated enough so that workers can shape them into the desired shapes. Pieces, especially long bars are mended by the hot pressing machines which are operated by experts.

واحد فیچی و برش اولیه

Faux Painting Unit

Color has been used for reducing the chemical reactions of iron which is natural and can't be avoided. In Samen Ferforge we made an extra effort from applying color on the surface of our final pieces in this unit which is in fact the last unit as well. Here in faux painting unit we apply paint using patina method to color the piece into various interesting looks. How we apply color depends solely on customer's demands. Paint is applied by the hands of our artists.

Raw Materials

In Samen Ferforge we cover the production of many tons. To meet this scale, we use huge amounts of raw materials that need to be stored in a place specialized for them. In Samen we decided on a place for this matter. All materials are stored accordingly to be issued as quickly as possible whenever they were needed.

Primary Cut Unit

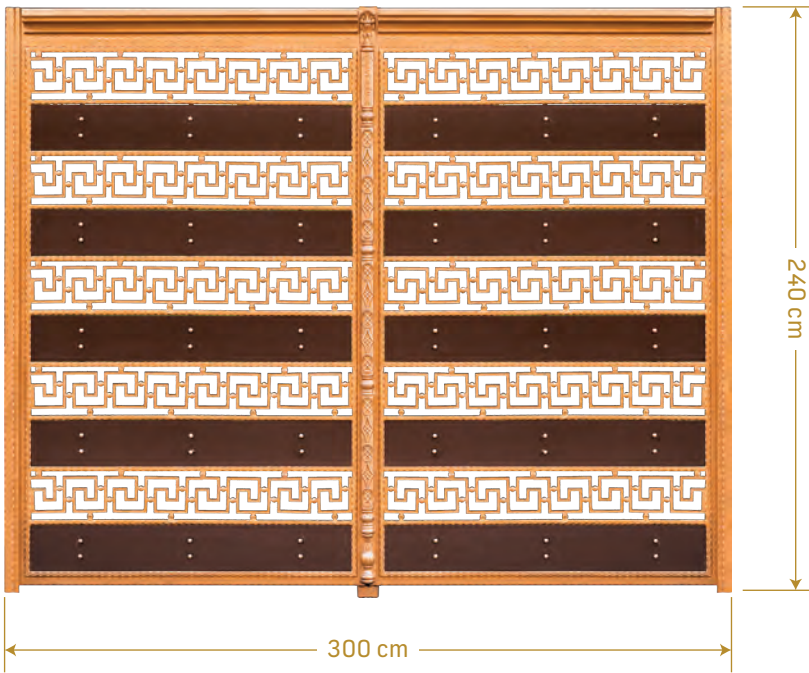

Molds Warehouse

Many new products are being introduced by Samen Ferforge every month. This number is rising and the only way to create such delicate pieces is to create molds of cast iron. All molds are recyclable and temporary made based on one original mold. These original molds which are in fact shaped carefully with the CNC machines are stored in a place safe and sound. We call this place the warehouse of molds.

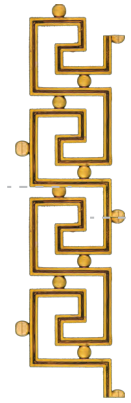

Cold Pressing Line

In this unit, steel sheets are ripped apart by pressure which is applied by the latest innovative machines for pressing. In Samen this task is done by hydraulic press technology to produce different shapes out of each sheet. The daily production of this unit reaches to 10 tons.

LIGHT POLE

Light poles are the newest productions of Samen Ferforge which stands out with the astonishing features. This light is designed and formed by the use of three pieces. This product is best used in open areas of public parks or the gardens, yards or even the front entrances.

The light is made out of one main stick which holds a very exclusive design all over its surface. Along with the T looking top part for holding two light bulbs, it is ranked as one of our top lux products.

This new product would light up your place into a very loving and peaceful environment.
